“Evolving the way you manage your pedestrian access.”

Product Overview

Evolve offers a number of different types of pedestrian entrance gates and turnstiles.

When it comes to selecting the correct product Evolve believes it important to understand the end users operational requirement, building layout, and their security and safety requirements. Once you understand these you can then select the most suitable product for the end user.

Evolve's technical team is always on hand to help its customers select the most suitable product, even if it's not Evolve's. By doing this we learn about the latest market trends and what the end user actual needs are.

All our products are designed to provide safe, high speed, bi-directional pedestrian throughput, with an elegant and sophisticated look, essential for today's corporate environment.

EvolveFace

Evolve face recognition terminals can be used with time and attendance and to control access to restricted areas.

The terminals are ideal for construction, manufacturing, small or large companies, food processing, education hospitals and surgeries.

Face terminals provide a simple TouchLess clocking in and out system for your employees. All they need to do is look directly into the terminal and they will be accurately verified in less than 2 seconds.

Whether you require a simple standalone solution or a multi-site system, we can offer the right solution to meet your site specific requirements and budget.

The terminals can hold up to 3,000 facial templates with 1 million logs, whilst remaining GDPR compliant. This is because it doesn't hold any biometric data that could be used elsewhere. A random mix of data from the users face is stored rather than a full identifiable scan.

TAILGATE DETECTION

Working in conjunction with HuperLab a world leader in intelligent video surveillance solutions, Evolve has help to develop the 3D tailgating and two-point verification camera.

The 3D depth-sensing technology can achieve the high accuracy level to 98% with high tolerance to light and shadow changes, and the overlapping of moving objects. With greater video analytics integration and system flexibility, it is capable of deploying people counting, virtual fence, surveillance and security, and customer service improvement for retail stores, transportation, home and store security.

Tailgating Detection

Most access control systems can allow tailgating because they can't detect the number of people entering via an access point, particularly if it's a normal door. Once open

numerous amounts of people can enter the access point.

When the 3D camera receives a signal from the access control system that a person is authorised to pass through the access point, the camera will automatically create a virtual tag of the person. Any unauthorised access via a second person will trigger an alarm and notify security within seconds.

Touchless Entry

To further enhance infection control, Evolve can provide access control systems using face cameras with temperature and face mask detection.
